# Claude Code + Obsidian

Starter Kit

In the next 10 minutes, you'll:

1. Talk to your Obsidian vault in plain English
2. Create tasks in 3 seconds (not 2 minutes)
3. Query your projects, notes, and data instantly
4. Try the morning routine that plans your day

December 2025 · Artem Zhutov

# Why This Matters

---

## Before

Open Obsidian  
Navigate to Tasks folder  
Create new note  
Add frontmatter  
Type task details  
Set priority manually  
Tag it correctly  
Save and organize

*2 minutes per task*

## After

“Create a task for  
meeting with client  
tomorrow 9am”

*3 seconds*

Task appears in Obsidian.  
Scheduled. Prioritized.  
Ready to work on.

This starter kit includes three Claude Code skills:

 **query**

Read projects, notes, data

 **tasknotes**

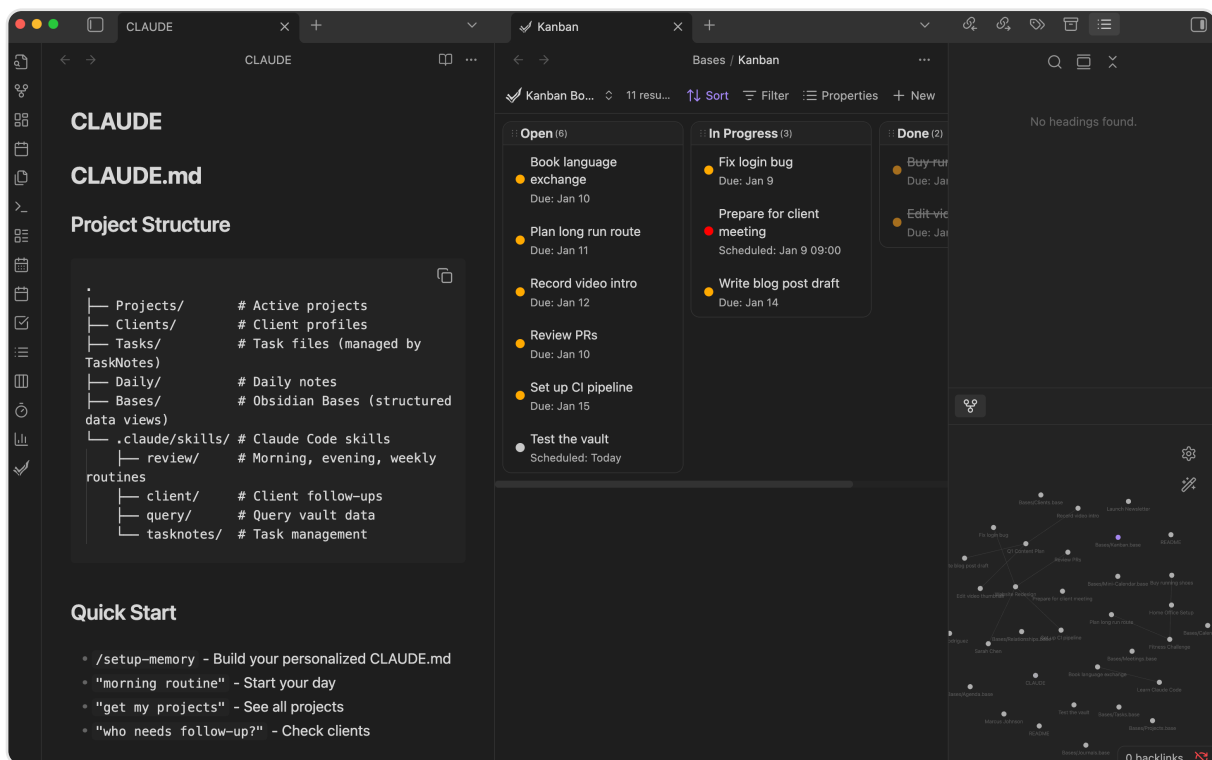

Create & manage tasks

 **review**

Daily workflow

# Step 1: Open the Vault

Open Obsidian and select this folder as a vault. When prompted, click **Trust author and enable plugins**.

*The starter kit vault with CLAUDE.md open*

The vault comes pre-configured with:

- **Tasks** — Your tasks (managed by TaskNotes)
- **Projects** — Goal tracking with structured data
- **Daily** — Daily notes and check-ins
- **.claude/skills** — Claude Code skills that make this work

**No setup needed.** The plugins (TaskNotes) are pre-installed and configured. Just open and go.

## Step 2: Start Claude Code

**Don't have Claude Code?** Install it first:

```
curl -fsSL https://claude.ai/install.sh | bash (Mac/Linux)
irm https://claude.ai/install.ps1 | iex (Windows PowerShell)
```

Open your terminal, navigate to the vault folder, and start Claude:

```
cd path/to/claude-code-obsidian-starter
claude
```

```
~ git:main [$]
> cd projects/claude-code-obsidian-starter/

claude-code-obsidian-starter git:main
> /Users/azhutov/.claude/local/claude --dangerously-skip-permissions

*  * Claude Code v2.0.76
*  * Sonnet 4.5 · Claude Max
*  * ~/projects/claude-code-obsidian-starter

A gift for you
Your rate limits are 2x higher through 12/31. Enjoy the extra room to think!

> Try "write a test for main.js"

~/projects/claude-code-obsidian-starter [main] Sonnet $0.00 bcee656d-6f84-4ee4
▶▶ bypass permissions on (shift+tab to cycle)
```

*Claude Code ready and waiting*

You'll see the Claude Code logo and a prompt. The path shows you're in the starter kit folder. Now you're ready to talk to your vault.

## Step 3: See the Magic

Type this in Claude Code:

Show my projects

Claude queries your vault and returns a formatted table:

```
> get my current projects
```

- **/query**
- **Bash**(grep -l "" Projects/\*.md 2>/dev/null | while read f; do echo "===  
\$(basename "\$f" .md) ==="; grep "^status:|^priority:|^deadline:"  
"\$f"; done)  
 L === Fitness Challenge ===  
 status: active  
 priority: medium  
 ... +21 lines (ctrl+o to expand)

Project	Status	Priority	Deadline
Website Redesign	active	high	2026-02-28
Fitness Challenge	active	medium	2026-03-31
Q1 Content Plan	active	medium	2026-03-31
Launch Newsletter	planning	medium	2026-02-15
Home Office Setup	paused	low	2026-01-31
Learn Claude Code	completed	high	2026-01-31

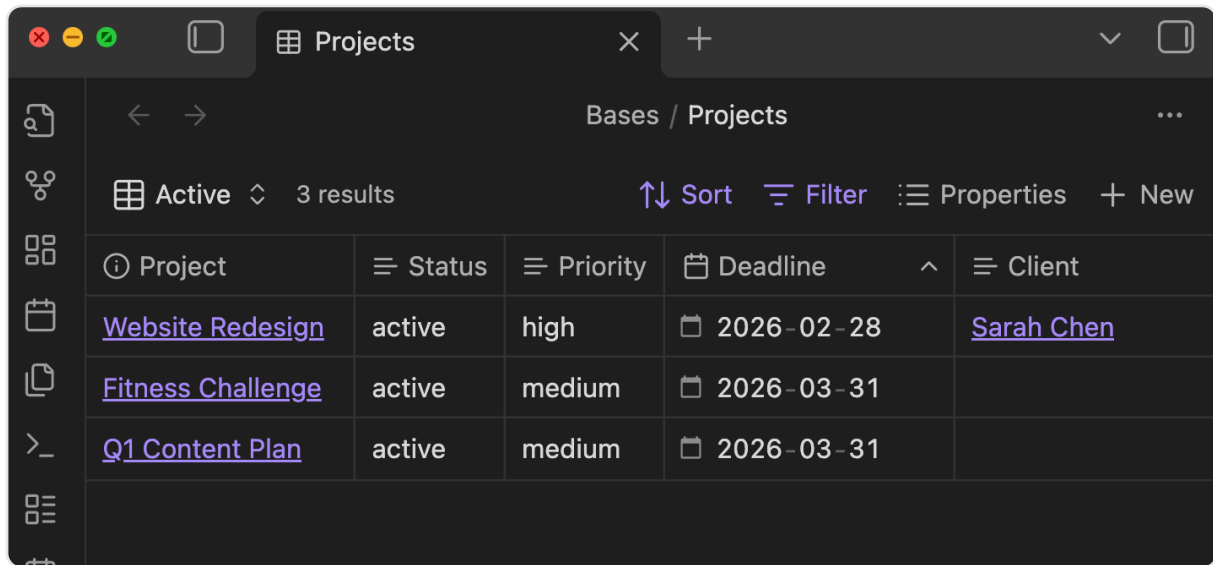

You have **3 active** projects, **1 in planning**, **1 paused**, and **1 completed**.

```
> Show me Website Redesign details
```

↩ send

*Claude returns your projects in a formatted table*

Now look at the **same data** in Obsidian (Bases/Projects):

The screenshot shows the Obsidian interface with a table view titled 'Projects'. The table has 5 columns: Project, Status, Priority, Deadline, and Client. There are 3 results shown, all with a status of 'active'. The projects are 'Website Redesign', 'Fitness Challenge', and 'Q1 Content Plan'. The deadlines are '2026-02-28', '2026-03-31', and '2026-03-31' respectively. The client for the first project is 'Sarah Chen'.

Project	Status	Priority	Deadline	Client
<a href="#">Website Redesign</a>	active	high	2026-02-28	<a href="#">Sarah Chen</a>
<a href="#">Fitness Challenge</a>	active	medium	2026-03-31	
<a href="#">Q1 Content Plan</a>	active	medium	2026-03-31	

*Same data in Obsidian — proof it's real*

**Same 6 projects. Same data.** Claude reads directly from your Obsidian vault — nothing is made up or cached.

## Step 4: Create with Natural Language

Now try creating a task. Just describe what you need:

Create a task to prepare for meeting with client tomorrow 9am

```
*  * Claude Code v2.0.76
*  * Sonnet 4.5 · Claude Max
*  * ~/projects/claude-code-obsidian-starter

A gift for you
Your rate limits are 2x higher through 12/31. Enjoy the extra room to think!

> can you create a new task to prepare for a meeting with client tomorrow morning? 9-10 am

• I'll help you create a task to prepare for your client meeting tomorrow morning.
• /tasknotes
• I'll create a task for your client meeting preparation tomorrow morning.
• Bash(/Users/azhutov/projects/claude-code-obsidian
  -starter/.claude/skills/tasknotes/tasknotes.p
    y create "Prepare for client meeting"
    --scheduled "2025-12-29T09:00:00"...
  L {
    "success": true,
    "data": {
      ... +17 lines (ctrl+o to expand)

• Perfect! I've created a task for your client meeting preparation:

  - Task: Prepare for client meeting
  - Scheduled: Tomorrow (2025-12-29) at 9:00 AM
  - Priority: High
  - Status: Near backlog
  - Location: Tasks/Prepare for client meeting.md

The task is ready in your Obsidian vault and will appear in your TaskNotes board scheduled for

> show my tasks for tomorrow

~/projects/claude-code-obsidian-starter [main +1 ~1] 18% Sonnet (22K/123K) $0.09 887f8c2d-ee
▶ bypass permissions on (shift+tab to cycle)
```

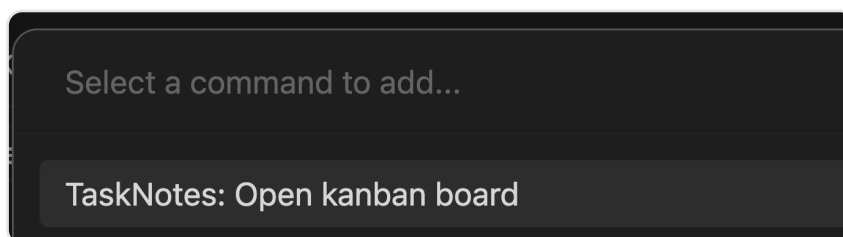

*Natural language → task with date, time, priority*

Claude understood:

- **What:** “Prepare for client meeting”
- **When:** Tomorrow at 9:00 AM
- **Priority:** High (inferred from “meeting with client”)

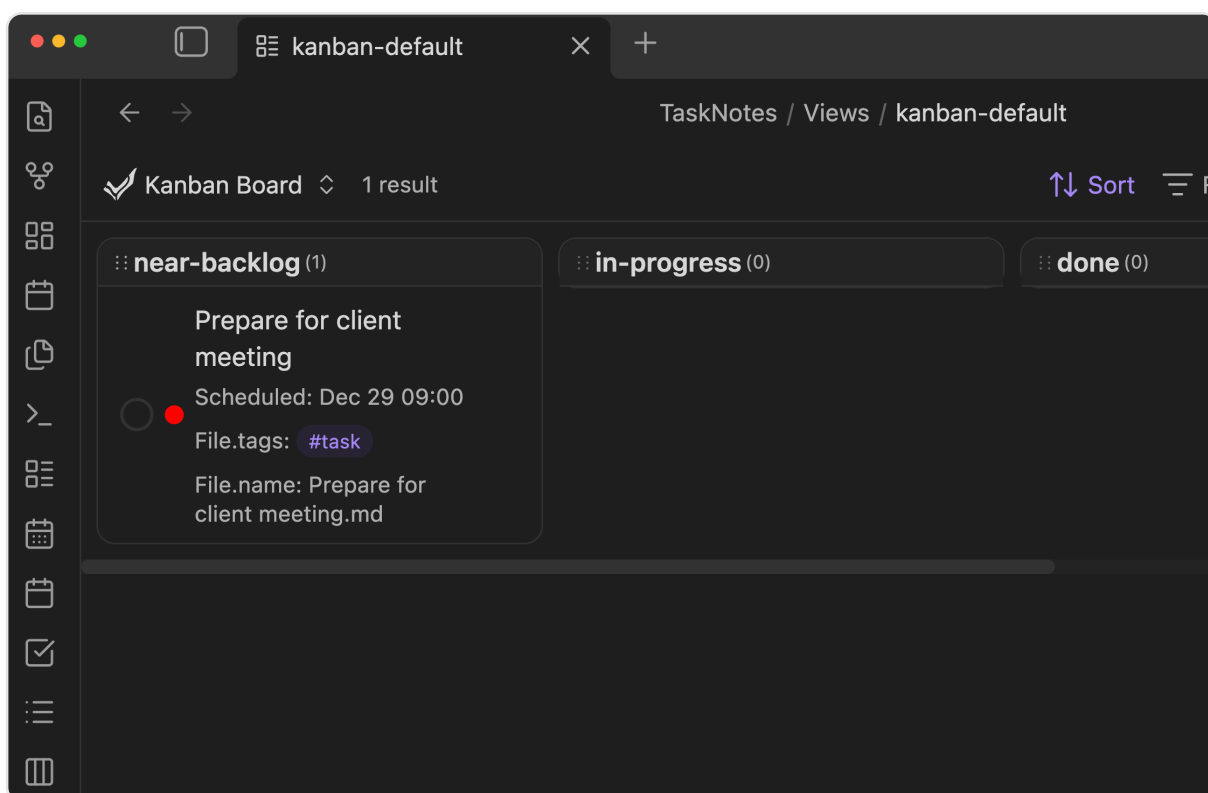

The task appears in your Tasks/ folder in Obsidian, properly formatted with frontmatter.

To see it on the Kanban board, open the command palette (Cmd+P) and search “kanban”:

*Cmd+P → search 'kanban'*

Your task is right there, scheduled and ready:

*Task appears on the Kanban board, scheduled and ready*

**This is the transformation:**

Instead of: navigate → create file → add frontmatter → fill fields → save  
You just: **describe what you need in plain English**

# More Things to Try

---

## Query Commands

Say this	What happens
Show my projects	Lists all active projects
Show high priority projects	Filters by priority
What are my tasks?	Lists active tasks
What did I edit recently?	Shows recent files

## Task Commands

Say this	What happens
Create a task: Call mom tomorrow	Creates scheduled task
Add a high priority task for X	Creates with priority
Show my tasks for today	Filters by date

## Morning Routine

Say this	What happens
Start my morning	Runs full morning workflow
Review yesterday	Shows yesterday's summary
Plan my day	Creates tasks based on projects

# Bonus: Morning Routine Skill

---

The starter kit includes a morning routine skill that helps you start each day with intention.

Start my morning

## What It Does

1. **Reviews yesterday** — Reads your recent daily notes and summarizes what happened
2. **Morning check-in** — Asks how you're feeling, your energy level, sleep quality
3. **Shows your projects** — Queries active projects so you remember what matters
4. **Plans the day** — Suggests tasks based on your energy and priorities

## The Daily Note

After the check-in, Claude creates a note in `Daily/` with your responses:

```
---
date: 2025-12-29
mood: good
energy: 7
sleep_quality: 8
---

# Morning Check-in

## How I'm feeling
Rested, ready to tackle the day...
```

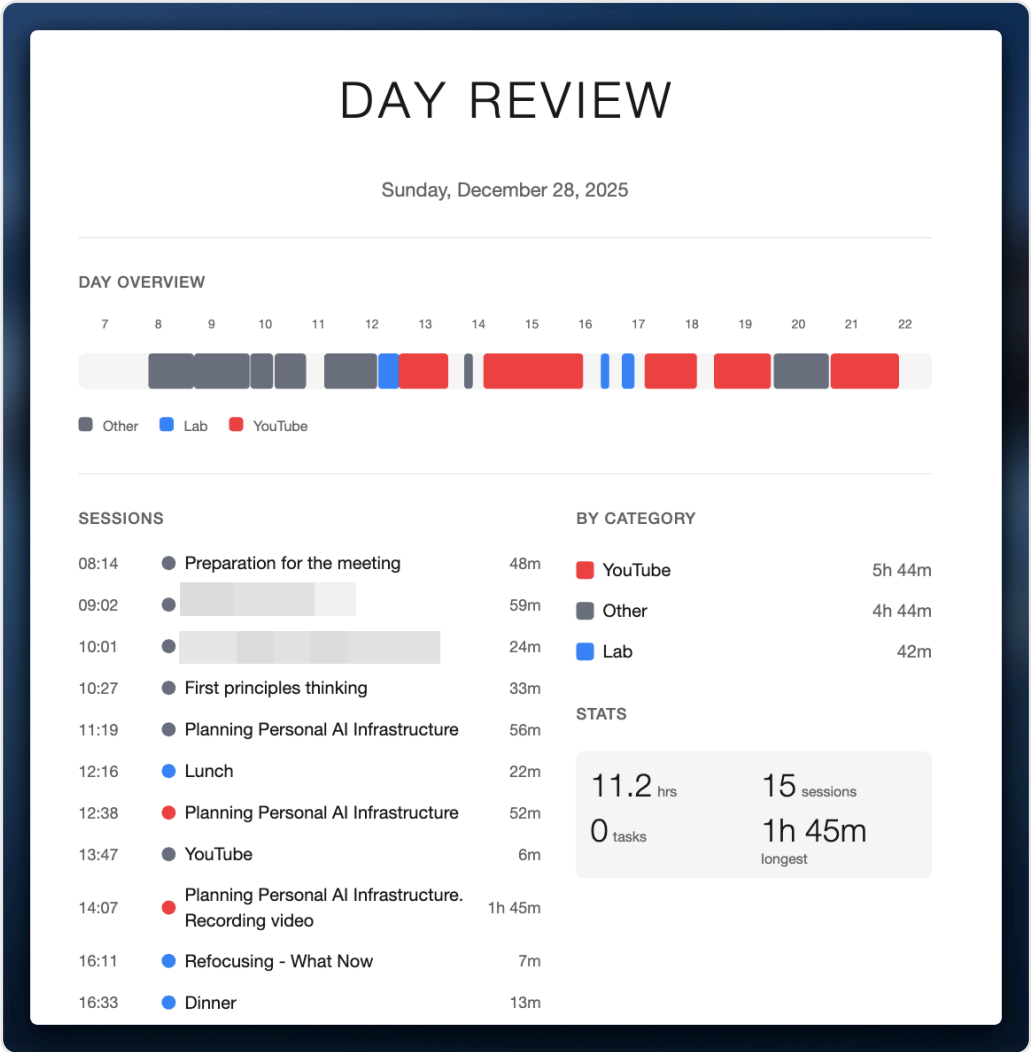

This creates a daily record you can look back on.  
Over time, you'll see patterns in your energy and productivity.

# Automate Your Entire Workflow

The starter kit is just the beginning. With custom skills, you can automate entire parts of your day — hands-free.

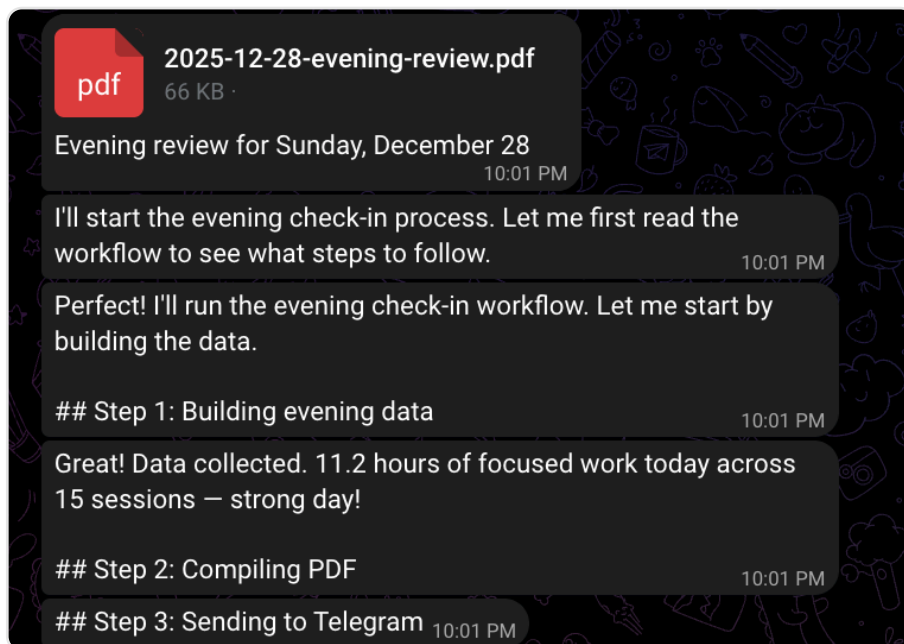

## Automated Daily Reports

Claude tracks your work throughout the day and generates a visual report:

Auto-generated daily report with time tracking

Then sends it to you automatically — no manual step required:

*Sent to Telegram automatically — no manual step*

#### What you can automate:

- Morning briefs with weather, calendar, and priorities
- Email triage and draft responses
- Meeting prep with context from your notes
- Weekly reviews aggregating your progress
- Client reports, invoices, status updates

If you can describe it, Claude can probably automate it.

# Troubleshooting

---

## “Cannot connect” or “Obsidian not responding”

Make sure Obsidian is open with this vault. The skills communicate with Obsidian through local plugins — Obsidian must be running.

## “Skill not found”

Make sure you ran `claude` from inside the vault folder. Claude automatically loads skills from `.claude/skills/`.

### Want to build your own automations?
