

+

Claude Code + Obsidian

Starter Kit

In the next 10 minutes, you'll:

1. Talk to your Obsidian vault in plain English
2. Create tasks in 3 seconds (not 2 minutes)
3. Query your goals, notes, and data instantly
4. Try the morning routine that plans your day

Why This Matters

Before

Open Obsidian
Navigate to Tasks folder
Create new note
Add frontmatter
Type task details
Set priority manually
Tag it correctly
Save and organize

2 minutes per task

After

“Create a task for meeting with client tomorrow 9am”

3 seconds

Task appears in Obsidian.
Scheduled. Prioritized.
Ready to work on.

This starter kit includes three Claude Code skills:

query

Read goals, notes, data

tasknotes

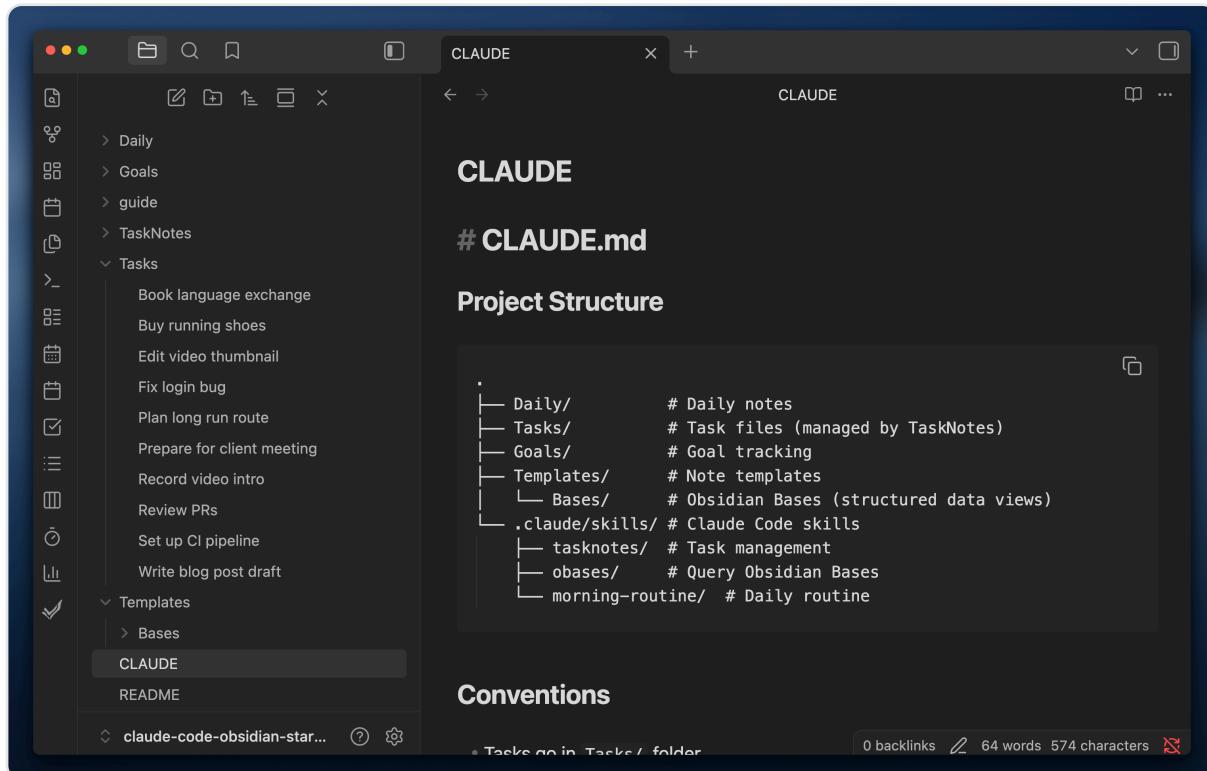

Create & manage tasks

morning-routine

Daily workflow

Step 1: Open the Vault

Open Obsidian and select this folder as a vault. When prompted, click **Trust author and enable plugins**.

The vault comes pre-configured with:

- **Tasks** — Your tasks (managed by TaskNotes)
- **Goals** — Goal tracking with structured data
- **Daily** — Daily notes and check-ins
- **.claude/skills** — The AI skills that make this work

No setup needed. The plugins (Dataview, TaskNotes, headless-bases) are pre-installed and configured. Just open and go.

Step 2: Start Claude Code

Don't have Claude Code? Install it first:

```
curl -fsSL https://claude.ai/install.sh | bash (Mac/Linux)  
irm https://claude.ai/install.ps1 | iex (Windows PowerShell)
```

Open your terminal, navigate to the vault folder, and start Claude:

```
cd path/to/claude-code-obsidian-starter  
claude .
```

```
~ git:main [::$]  
> cd projects/claude-code-obsidian-starter/  
  
claude-code-obsidian-starter git:main  
> /Users/azhutov/.claude/local/claude --dangerously-skip-permissions  
  
* [Claude] * Claude Code v2.0.76  
* * Sonnet 4.5 · Claude Max  
* * ~/projects/claude-code-obsidian-starter  
  
A gift for you  
Your rate limits are 2x higher through 12/31. Enjoy the extra room to think!  
  
> Try "write a test for main.js"  
  
~/projects/claude-code-obsidian-starter [main] Sonnet $0.00 bcee656d-6f84-4ee4  
► bypass permissions on (shift+tab to cycle)
```

You'll see the Claude Code logo and a prompt. The path shows you're in the starter kit folder. Now you're ready to talk to your vault.

Step 3: See the Magic

Type this in Claude Code:

```
Show my goals
```

Claude queries your vault and returns a formatted table:

```
> Show my goals
● /query
● Bash(/Users/azhutov/projects/clause-code-obsidian
      -starter/.claude/skills/query/query.py goals)
└ name           | Status
    | Priority   | Area
... +20 lines (ctrl+o to expand)

● Here are your current goals:

| Goal          | Status     | Priority | Area |
|:---|:---|:---|:---|
| Build Side Project | In progress | Medium | Career |
| Exercise 5 Times a Week | In progress | High | Health |
| Get to Bed Before 11 | In progress | High | Health |
| Launch YouTube Channel | In progress | High | Career |
| Learn Spanish | In progress | Medium | Learning |
| Run Marathon | In progress | High | Health |

You have 6 active goals, all currently in progress. Three of them are high priority (Exercise 5 Times a Week, Get to Bed Before 11, and Learn Spanish), and they span across Career, Health, and Learning areas.

> █
~/projects/clause-code-obsidian-starter [main +1 ~1] 18% Sonnet (23K/123K) $0.12 8
►▶ bypass permissions on (shift+tab to cycle)
```

Now look at the **same data** in Obsidian (Templates/Bases/Goals):

| file | Area | Frequency | status | Priority |
|---|----------|---------------|-------------|----------|
| Exercise 5 Times a Week | Health | Every morning | In progress | High |
| Get to Bed Before 11 | Health | Every morning | In progress | High |
| Launch YouTube Channel | Career | Every morning | In progress | High |
| Run Marathon | Health | Every week | In progress | High |
| Build Side Project | Career | Every week | In progress | Medium |
| Learn Spanish | Learning | Every morning | In progress | Medium |

Same 6 goals. Same data. Claude reads directly from your Obsidian vault — nothing is made up or cached.

Step 4: Create with Natural Language

Now try creating a task. Just describe what you need:

```
Create a task to prepare for meeting with client tomorrow 9am
```

```
* * * Claude Code v2.0.76
* * * Sonnet 4.5 · Claude Max
* * * ~/projects/clause-code-obsidian-starter

A gift for you
Your rate limits are 2x higher through 12/31. Enjoy the extra room to think!

> can you create a new task to prepare for a meeting with client tomorrow morning? 9-10 am
● I'll help you create a task to prepare for your client meeting tomorrow morning.

● /tasknotes

● I'll create a task for your client meeting preparation tomorrow morning.

● Bash(/Users/azhutov/projects/clause-code-obsidian
    -starter/.claude/skills/tasknotes/tasknotes.p
    y create "Prepare for client meeting"
    --scheduled "2025-12-29T09:00:00"...)
L {
    "success": true,
    "data": {
        ... +17 lines (ctrl+o to expand)

● Perfect! I've created a task for your client meeting preparation:
    - Task: Prepare for client meeting
    - Scheduled: Tomorrow (2025-12-29) at 9:00 AM
    - Priority: High
    - Status: Near backlog
    - Location: Tasks/Prepare for client meeting.md

The task is ready in your Obsidian vault and will appear in your TaskNotes board scheduled for tomorrow morning.

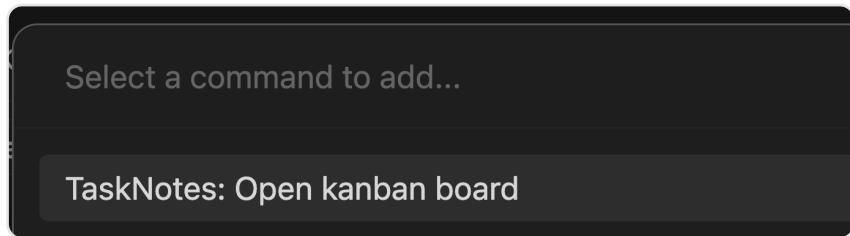

> show my tasks for tomorrow
~/projects/clause-code-obsidian-starter [main +1 ~1] 18% Sonnet (22K/123K) $0.09 887f8c2d-ee0
▶▶ bypass permissions on (shift+tab to cycle)
```

Claude understood:

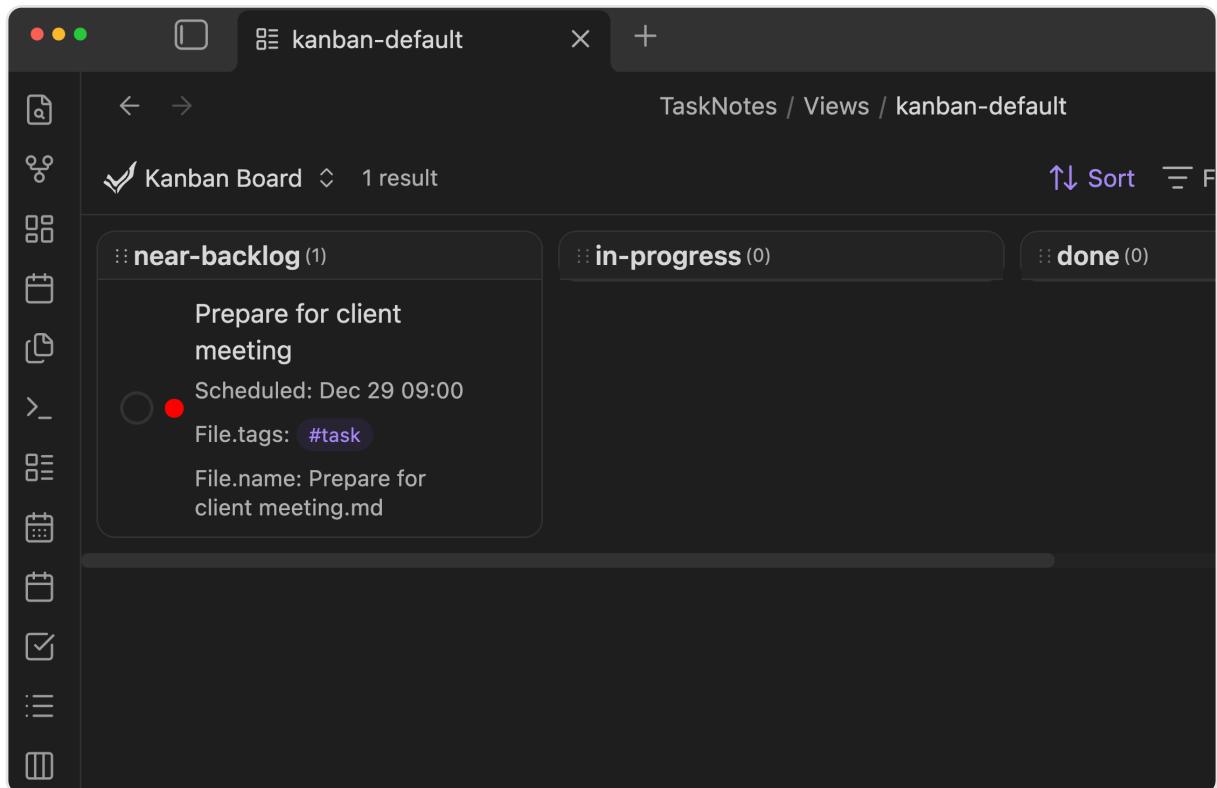

- **What:** “Prepare for client meeting”
- **When:** Tomorrow at 9:00 AM
- **Priority:** High (inferred from “meeting with client”)

The task appears in your Tasks/ folder in Obsidian, properly formatted with frontmatter.

To see it on the Kanban board, open the command palette (Cmd+P) and search “kanban”:

Your task is right there, scheduled and ready:

This is the transformation:

Instead of: navigate → create file → add frontmatter → fill fields → save
You just: **describe what you need in plain English**

More Things to Try

Query Commands

| Say this | What happens |
|---------------------------|------------------------|
| Show my goals | Lists all active goals |
| Show high priority goals | Filters by priority |
| What are my tasks? | Lists active tasks |
| What did I edit recently? | Shows recent files |

Task Commands

| Say this | What happens |
|----------------------------------|------------------------|
| Create a task: Call mom tomorrow | Creates scheduled task |
| Add a high priority task for X | Creates with priority |
| Show my tasks for today | Filters by date |

Morning Routine

| Say this | What happens |
|------------------|------------------------------|
| Start my morning | Runs full morning workflow |
| Review yesterday | Shows yesterday's summary |
| Plan my day | Creates tasks based on goals |

Bonus: Morning Routine Skill

The starter kit includes a morning routine skill that helps you start each day with intention.

Start my morning

What It Does

1. **Reviews yesterday** — Reads your recent daily notes and summarizes what happened
2. **Morning check-in** — Asks how you're feeling, your energy level, sleep quality
3. **Shows your goals** — Queries active goals so you remember what matters
4. **Plans the day** — Suggests tasks based on your energy and priorities

The Daily Note

After the check-in, Claude creates a note in Daily/ with your responses:

```
---  
date: 2025-12-29  
mood: good  
energy: 7  
sleep_quality: 8  
---  
  
# Morning Check-in  
  
## How I'm feeling  
Rested, ready to tackle the day...
```

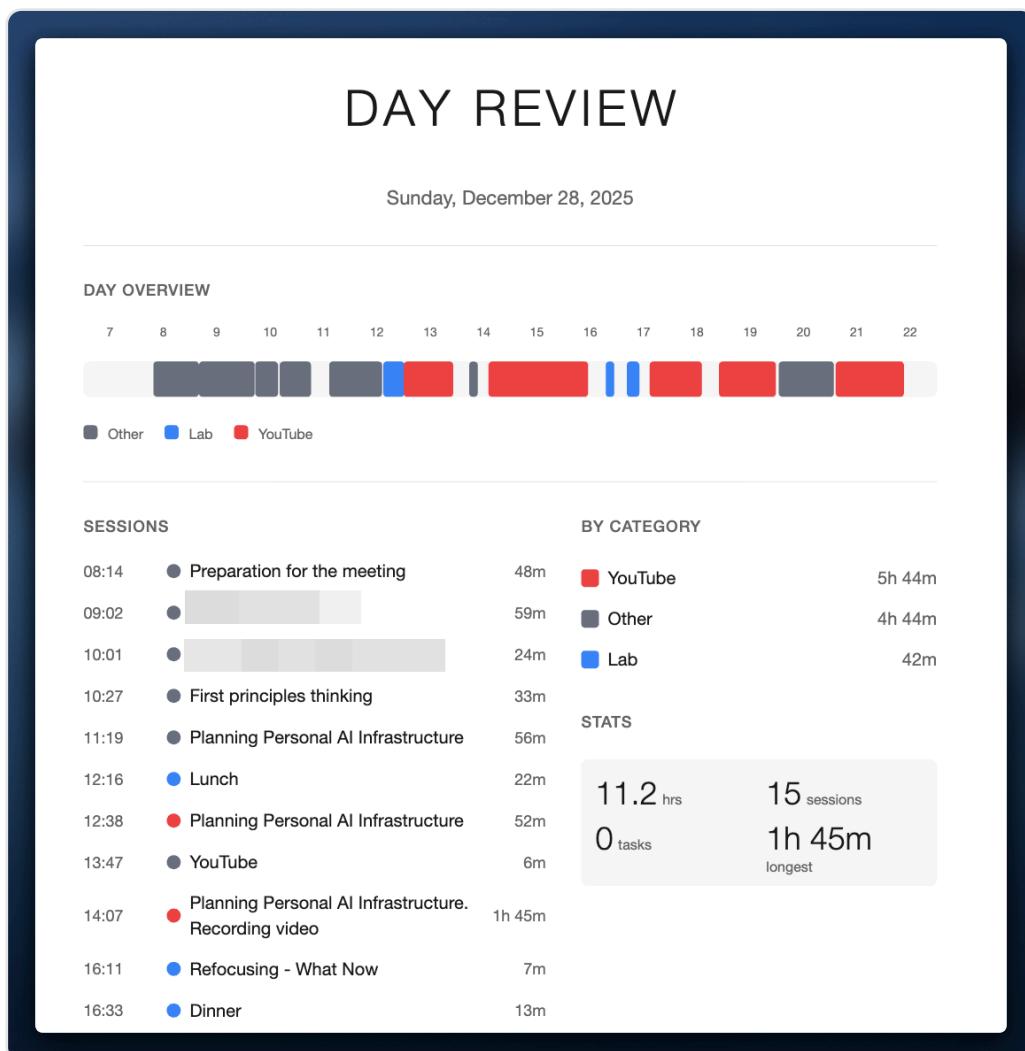

This creates a daily record you can look back on.
Over time, you'll see patterns in your energy and productivity.

Automate Your Entire Workflow

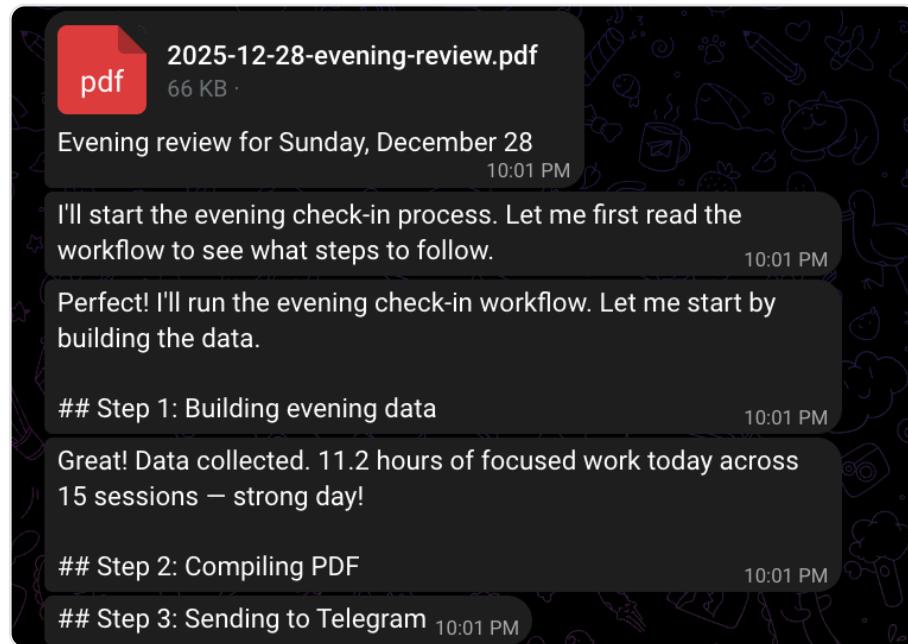

The starter kit is just the beginning. With custom skills, you can automate entire parts of your day — hands-free.

Automated Daily Reports

Claude tracks your work throughout the day and generates a visual report:

Then sends it to you automatically — no manual step required:

What you can automate:

- Morning briefs with weather, calendar, and priorities
- Email triage and draft responses
- Meeting prep with context from your notes
- Weekly reviews aggregating your progress
- Client reports, invoices, status updates

If you can describe it, Claude can probably automate it.

Troubleshooting

“Cannot connect” or “Obsidian not responding”

Make sure Obsidian is open with this vault. The skills communicate with Obsidian through local plugins — Obsidian must be running.

“Skill not found”

Make sure you ran `claude .` (with the dot) from inside the vault folder. The dot tells Claude to load skills from `.claude/skills/`.
